

Dice Set “Mathematics”, 12 pcs.

20 mm, made of plastic with rounded edges/corners

Instructions

This set of dice is ideal for practising the standard arithmetic operations $+$ $-$ $\cdot$ $:$ $!$ To make them easier to distinguish visually, we have designed the dice in different colours for each version.

This helps children consolidate their basic multiplication tables and, depending on the selection and number of dice, allows for a wide range of exercises within the number range up to 1,000 and beyond.

The level of difficulty can be specifically adjusted by the quantity and selection of the digit/number cubes. We have deliberately avoided fixed rules so that the game can be tailored to the target group. It is therefore an open-ended game system.

Great fun for young and old alike!
